Level: B1

Neighborhoods and Districts

I. Read these paragraphs:

Throughout the United States there are areas of large cities that have their own names, for example, Watts in Los Angeles, Beacon Hill in Boston, Lincoln Park in Chicago and Soho in New York. These parts of the city are called neighbourhoods.

Every city has different parts for different reasons. These parts are called districts. There are three kinds of districts: industrial, business and residential. The industrial district contains factories and warehouses. The business district contains stores, offices and banks. The residential district is where people live. There we see houses, schools and churches.

II. Match column A and column B:

A

1. neighbourhood
2. industrial district
3. business district
4. residential district

B

- a. factories
- b. houses
- c. community
- d. stores
